Description:
The Club3D SenseVision MST Hubs utilize Multi Stream Transport, a unique DisplayPort™ 1.2 feature that creates the ability to transport multiple independent uncompressed display (and audio) streams over a single cable, supporting protected content and high performance applications such as 3D gaming. This enables the use of multiple monitors connected by MST hub configuration. The Club3D MST Hubs is able to distribute those video streams to the connected screens. The Club3D MST Hubs do not increase the bandwidth of DisplayPort™ 1.2 outputs, but it enbales the optimal use of it.

DisplayPort™ Dual Mode
Also known as DP++, is a feature which enables the output of single-link DVI and HDMI™ signals from the DP output. Passive adapters should be used to convert to HDMI and/or DVI connectors.

Note: When using a DisplayPort™ 1.1 video card the MST hub will act as a splitter, automatically mirroring your video source across all displays.
